CPD Reflective Entry

Title
Transition from Ischial Containment to Sub-Ischial Transfemoral Socket Design

Date of event being reflected upon
Wednesday 22 October 2025

Introduction
I had the opportunity to design and fabricate a sub-ischial transfemoral socket for a patient who had previously been using an ischial containment socket for over 6years . This experience allowed me to apply my knowledge of transfemoral socket design in a practical clinical situation and further develop my understanding of the differences between ischial containment and sub-ischial socket designs.

What event or topic are you reflecting on?
Designing and fabricating a sub-ischial transfemoral socket for apatient who had been using an ischial containment socket for over 6 years,and comparing the two desings effect on comfort,suspension,control and gait.

Would you call this a positive or challenging event?
Based of from the experience its a positive story,the patient reported improved comfort at the preineal region,especially during sitting,gait,and hip stability,better prosthetic control was assessed and outcome measures (PLUS-M™ and Onform gait analysis) supported the process.it improved patience confidence with device and shifted my practice towards patient-centered and evidence based decisions.

What happened?
I incorporated the patient's clinical anatomical findings and relevant clinical findings into the socket design and fabrication process by using NU FlexSIV and NU FlexSIS socket designs . During the test fitting, I assessed the socket in the various plans of the body,I observed the patient's comfort, suspension, residual-limb movement within the socket, pelvic stability and gait pattern. I also obtained honest feedback from the patient regarding areas of pressure, comfort while sitting and their overall perception of the new socket compared with the previous ischial containment design.
The fitting process reinforced the importance of making incremental modifications based on both clinical assessment and patient feedback. I learned that small changes to the socket shape, trimlines and pressure distribution can have a significant effect on comfort, stability and gait. The experience also improved my confidence in evaluating whether the socket was providing adequate containment without unnecessarily restricting the patient.

Looking back
This case improved my practical understanding of sub-ischial transfemoral socket design

CPD Reflective Entry

and the clinical reasoning required when moving a patient from an ischial containment design. I gained greater appreciation of the relationship between socket designs, residual-limb anatomy, suspension system , femoral control and gait.
I also learned the importance of involving the patient throughout the fitting process. Their feedback provided information that could not be obtained through observation gait training alone, particularly regarding comfort during sitting, pressure distribution and the overall feeling of security within the socket.

Looking forward
This experience has strengthened my approach to transfemoral socket assessment and design. In future cases, I will place greater emphasis on precise individual anatomy, functional requirements,patient feedback and outcome measures rather than applying a standard socket design approach. I will also ensure that dynamic gait assessment forms an important part of the evaluation process and that modifications are made systematically based on clinical findings.
Overall, this experience has increased my confidence in designing and fitting sub-ischial transfemoral sockets and has contributed to my development of more patient-centred and evidence-informed clinical decision-making.

Appendix
I used Prosthetic Limb Users Survey of Mobility (PLUS-M™) which provided me with objective and repeatable measurements of socket comfort, prosthetic function and mobility.
Observational gait analysis
Utilized Onform as a video-based analysis tool to support my observational gait analysis,viewed and recorded patient pattern in the various plans of the body, including reviewing the recorded video using the slow motion feature on the app, to ascertain the various gait patterns using the biomarkers such as the hip,knee,foot,ankle and trunk movements,step length, cadence to compare walking symmetry and overall gait patterns.Documented findings,where each findings informs me my clinical guide to better patient care

CPD Course (accredited)

How many CPD hours relate to this activity?
8

Start date of event
Saturday 29 August 2026

The nature of the learning activity – what did you do?
Identified what quality improvement (QI) is and why it is important in healthcare.

Description of the learning activity – what did it consist of?
Understanding Quality Improvement (QI) – what QI is and how it improves healthcare.
Quality principles – effectiveness, efficiency, safety, timeliness, person-centred care, and equity.
Identifying problems – recognising gaps between current practice and the desired standard.
QI methods – PDSA, Lean, Six Sigma, benchmarking, clinical pathways, and root cause analysis.
Data collection – using patient feedback, outcome measures, clinical records, staff feedback, and observations.
Data analysis – analysing information to identify problems and measure improvement.
Implementing change – introducing interventions such as training, supervision, improved processes, or better resources.
Teamwork and patient involvement – involving healthcare professionals and patients in improvement activities.
Project management – setting objectives, creating plans, assigning responsibilities, and monitoring progress.
Impact evaluation – determining whether the changes actually improved patient care and outcomes.
Sustainability – ensuring that improvements are maintained over time.

Outcome of the learning activity – how did the learning relate to your work?
The knowledge was directly applicable to your work as an orthotist and prosthetist, especially since QI enables you to enhance the efficacy, safety, and results of the

CPD Development Diary Entry

equipment and rehabilitation services you offer.

Start date of event
Saturday 29 August 2026

The nature of the learning activity – what did you do?
Attended a live webinar on the transformative role of orthotist and prosthet

Description of the learning activity – what did it consist of?
The webinar explores the evolving role of orthotists and prosthetists in collaborative, relationship-centered care and demonstrates how coordinated treatment planning and long-term clinical partnerships can improve mobility, reduce secondary complications, enhance participation, and improve quality of life across a lifetime.
It also brings the clinical partnership to life through clinical examples, supportive research, and interdisciplinary perspectives, with special attention to pediatric populations where family-centered, coordinated care across developmental milestones shapes outcomes that last a lifetime and invites the broader healthcare team to understand when and how to engage orthotists and prosthetists.

Outcome of the learning activity – how did the learning relate to your work?
As a prosthetist and orthotist, the webinar Describe the direct and indirect costs of living with a
disability and explain how mobility impairment amplifies those costs across a patient's lifespan Recognize how the full integration of orthotist and prosthetist expertise within the broader healthcare team improves patient outcomes

Start date of event
Sunday 16 August 2026

The nature of the learning activity – what did you do?
In this episode, host Seth O'Brien, CP, FAAOP(D), welcomes David Patterson, MS, CO, LO, founder of GOAL Pediatric Orthotics and chair of the American Academy of Orthotists and Prosthetists' new Pediatric Society, to discuss the pressing need for enhanced education, collaboration, and support within the field of paediatric orthotics. Patterson articulates the challenges faced by clinicians who encounter paediatric cases infrequently, as children often represent only a small fraction of their overall caseload. The discussion highlights how the new Society is dedicated to fostering confidence among practitioners through mentorship, shared learning experiences, and the provision of expanded educational resources. Furthermore, they delve into innovative advancements such as 3D printing technology, the necessity for robust research in paediatric orthotics, and the establishment of best practices tailored specifically for this demographic. The conversation underscores the critical understanding that treating children necessitates a unique approach, one that is influenced by factors such as growth, family involvement, and adherence to treatment protocols.

Podcast

How many CPD hours relate to this activity?
0.5

Start date of event
Thursday 30 July 2026

The nature of the learning activity – what did you do?
In this episode, Dr. Steve Gard, Editor-in-Chief of the Journal of Prosthetics and Orthotics, is joined by Kiley Armstrong, MPO, CPO, Research Prosthetist-Orthotist at Northwestern University's Feinberg School of Medicine, and Juan Cave II, MSPO, CPO, FAAOP, Advanced Research Prosthetist-Orthotist at the Minneapolis VA Health Care System. They engage in a comprehensive discussion about the significance of clinically relevant orthotics and prosthetics (O&P) research. The conversation delves into the essential role that clinicians play in shaping impactful research that not only supports evidence-based practice but also enhances patient outcomes and informs critical policy decisions. Kiley and Juan share insights from their professional journeys into the fields of O&P and research, discuss various impactful projects they have been involved in, and provide practical guidance for practitioners who are keen to contribute to research initiatives. The episode underscores the importance of collaboration, networking, and dismantling barriers to effectively integrate clinical practice with research efforts.

Description of the learning activity – what did it consist of?
The episode features a dialogue led by Dr. Steve Gard, who is joined by Kiley Armstrong and Juan Cave II, both esteemed professionals in the field of O&P research. The discussion centres on the importance of conducting clinically relevant research within the O&P community. Throughout the episode, the participants explore how clinicians can influence and shape research that is meaningful and applicable to real-world practice. Kiley and Juan recount their personal experiences and the significant projects they have undertaken, providing listeners with valuable insights into the research process. Furthermore, they offer practical advice for practitioners who wish to engage in research, highlighting the necessity of collaboration and networking to foster a more integrated approach between clinical practice and research initiatives.

CPDme
Development for Life

CPD Development Diary Entry

Outcome of the learning activity – how did the learning relate to your work?
The insights gained from this episode are directly applicable to my professional practice as they emphasise the vital connection between clinical work and research in the field of O&P. Understanding the role of clinicians in shaping research has reinforced my commitment to engaging in evidence-based practices that enhance patient care and outcomes. The discussions around impactful projects and the sharing of professional journeys have inspired me to consider how I can contribute to research efforts within my own practice. Additionally, the emphasis on collaboration and networking has highlighted the importance of building relationships with fellow practitioners and researchers, which is essential for fostering a culture of continuous improvement and innovation in the field.

CPD Webinar (Recording)

How many CPD hours relate to this activity?
1.25

Start date of event
Sunday 26 July 2026

The nature of the learning activity – what did you do?
I watched an online CPD webinar focused on the biomechanics of partial foot amputation.

Description of the learning activity – what did it consist of?
The webinar covered several key topics, including the biomechanics of partial foot amputation, various intervention techniques for managing this condition, and strategies for gait restoration. Each section provided valuable insights into the complexities of partial foot amputation and the importance of tailored interventions to enhance patient outcomes. Additionally, the session included case studies that illustrated successful rehabilitation practices.

Outcome of the learning activity – how did the learning relate to your work?
The knowledge gained from the webinar significantly enhanced my understanding of partial foot amputation, including its intervention techniques and methods for restoring gait propulsion and function. This learning is directly applicable to my work, as it equips me with the skills to better assess and manage patients with partial foot amputations. Furthermore, it reinforces the importance of evidence-based practice in improving rehabilitation outcomes for this patient population.

Start date of event
Sunday 26 July 2026

The nature of the learning activity – what did you do?
Participated in an online webinar on upper extremity orthotics.

Description of the learning activity – what did it consist of?
This course reviewed orthopedic related wrist/hand issues and determine the correct orthotic interventions. The focus will then shift to the post-stroke hand, the challenges it presents, and the goals of keeping or making it functional again. Finally, it will discuss a resting hand splint and a thumb splint that have the potential to optimize patient compliance and provide functional outcomes.

Outcome of the learning activity – how did the learning relate to your work?
This learning experience significantly enhanced my understanding of upper limb orthotic interventions, equipping me with valuable insights that I can apply in my professional practice. The knowledge gained will enable me to better assess and implement orthotic solutions tailored to the needs of my patients, particularly those recovering from strokes. Overall, this webinar has reinforced my commitment to providing evidence-based care and improving patient outcomes through effective orthotic management.

Shared decision making in O&P: from tools to conversation

This activity was arranged:
Education

The category this activity relates to is
Professional

How many CPD hours relate to this activity?
1

Start date of event
Friday 24 July 2026

The nature of the learning activity – what did you do?
I completed a learning session on shared decision-making in prosthetics and orthotics (O&P) care. The session focused on patient-centred communication, validated decision-making tools, patient interview techniques, and effective collaboration between O&P clinicians and the wider multidisciplinary healthcare team.

Description of the learning activity – what did it consist of?
The learning was about finding out how shared decision-making can be embedded into everyday clinical practice. I learned about the importance of engaging patients in decisions about their treatment, identifying barriers and facilitators to shared decision making, and using patient-centred interview techniques.

Outcome of the learning activity – how did the learning relate to your work?
This learning is directly relevant to my work as a prosthetist and orthotist, particularly when assessing patients, selecting appropriate orthotic or prosthetic interventions, and discussing treatment options. It reinforced the importance of understanding each patient's goals, lifestyle, functional needs, and expectations rather than making clinical decisions based solely on assessment findings.

CPD Webinar (Recording)

How many CPD hours relate to this activity?
1

Start date of event
Friday 17 July 2026

The nature of the learning activity – what did you do?
I completed a self-directed course in the assessment and management of paediatric plagiocephaly and torticollis. The course was based on a webinar originally presented in March 2025 and included a learning module and assessment quiz.

Description of the learning activity – what did it consist of?
The course included assessment of cranial asymmetries and motor development milestones to recognise plagiocephaly and torticollis in infants. It also emphasised the development of individualised treatment regimens that incorporated therapeutic interventions, positioning strategies, and helmet therapy.

Outcome of the learning activity – how did the learning relate to your work?
This learning is very relevant to my work as a Prosthetist and Orthotist especially as I provide orthotic management for paediatric patients. Knowing about plagiocephaly, torticollis and early motor development allows me to recognise clinical presentations that may need orthotic treatment or referral to other members of the multidisciplinary team.

Outcome measures in lower limb prosthetics : empowering through mobility

This activity was arranged:
Professional

How many CPD hours relate to this activity?
1

Start date of event
Friday 17 July 2026

The nature of the learning activity – what did you do?
I participated in a one-hour introductory-level continuing education course through Hanger Clinic University, focusing on mobility outcome measures in lower-limb prosthetic care. Throughout the course, I engaged with a variety of educational materials, including course lectures, methodology guides, and sample patient case studies. Additionally, I successfully completed the course assessment quiz, achieving a score of 80% or higher, which demonstrates my understanding of the content presented.

Description of the learning activity – what did it consist of?
The course focused on the use of validated mobility outcome measures, particularly the Prosthetics Limb Users Survey of Mobility (PLUS-M), in the assessment and rehabilitation of lower-limb prosthetic patients.

Outcome of the learning activity – how did the learning relate to your work?
The knowledge gained from this course is directly applicable to my role as a Prosthetist and Orthotist, particularly in the areas of assessment, fitting, and rehabilitation of lower-limb prosthetic patients. By understanding how standardised outcome measures like the PLUS-M can complement clinical assessments, I am better equipped to evaluate a patient's functional mobility. This enhanced understanding will ultimately contribute to improved patient outcomes and more tailored rehabilitation strategies.

Does AFO affect muscle activity

This activity was arranged:
Professional

How many CPD hours relate to this activity?
1

Start date of event
Saturday 11 April 2026

The nature of the learning activity – what did you do?
This session will explore the origins of fears related to the use of Ankle-Foot Orthoses (AFOs) and summarise the current literature from an ongoing scoping review on the impact of AFOs on muscle activity, as measured by electromyography (EMG). The session aims to equip attendees with the necessary tools to engage in evidence-based conversations with patients, their families, and other healthcare providers regarding these concerns. By addressing the psychological and physiological aspects of AFO usage, the session seeks to foster a more informed dialogue around this important topic.

Description of the learning activity – what did it consist of?
The session aims to provide attendees with the tools to engage in evidence-based conversations with patients, their families, and other healthcare providers regarding the concerns associated with AFOs. It consists of a comprehensive overview of the latest research findings, practical case studies, and interactive discussions that encourage participants to share their experiences and insights. By the end of the session, attendees will have a clearer understanding of how to communicate effectively about the implications of AFOs on muscle activity and patient outcomes.

Outcome of the learning activity – how did the learning relate to your work?
The webinar will offer a well-balanced blend of theoretical insights and practical information based on case studies, providing valuable knowledge for medical professionals. This learning experience is directly relevant to my work, as it enhances my ability to support patients in making informed decisions about their treatment options. Additionally, the insights gained will enable me to contribute more effectively to interdisciplinary discussions, ensuring that patient care is grounded in the latest evidence and best practices.

The nature of the learning activity – what did you do?
I recently completed a webinar on advanced pain management strategies in osteoarthritis, which was hosted by Thuasane Academy. This session provided valuable insights into innovative approaches and evidence-based practices that can significantly enhance patient care. The interactive format allowed for real-time engagement with experts in the field, fostering a deeper understanding of the complexities surrounding osteoarthritis management.

Description of the learning activity – what did it consist of?
The webinar presented some of the latest findings and strategies for effectively managing osteoarthritis pain. It covered a comprehensive range of options, including pharmacological treatments, physical therapy interventions, and lifestyle modifications. Additionally, the session highlighted the importance of a multidisciplinary approach in optimising patient outcomes and improving overall quality of care.

Outcome of the learning activity – how did the learning relate to your work?
This webinar provided healthcare professionals and clinicians with the latest strategies for managing osteoarthritis pain effectively, which is directly applicable to my work. By integrating these evidence-based practices into my clinical approach, I aim to enhance patient care and outcomes significantly. The knowledge gained will not only inform my treatment plans but also empower me to educate patients about their options, ultimately leading to improved management of their condition.

Title of CPD activity
Re-thinking early orthotic intervention on post stroke patients

This activity was arranged:
Professional

How many CPD hours relate to this activity?
1

Start date of event
Friday 20 March 2026

The nature of the learning activity – what did you do?
In this session, Sally Kenworthy discussed how Ankle-Foot Orthoses (AFOs) can enhance other therapeutic interventions during the early stages of recovery following a stroke. She emphasised their role as proactive rehabilitation tools that support the principles of motor learning. Furthermore, the session highlighted the importance of AFOs in early rehabilitation efforts, demonstrating how they can facilitate improved patient outcomes.

Description of the learning activity – what did it consist of?
The session began with a definition of neuroplasticity, exploring its relationship to motor recovery as opposed to compensation, and its critical role in rehabilitation following a stroke. The discussion then reframed AFOs as primary rehabilitative tools that align with motor learning principles, thereby enhancing the recovery process. Additionally, the session identified key design features that contribute to the effectiveness of AFOs in gait rehabilitation, providing insights into their practical application in therapeutic settings.

Outcome of the learning activity – how did the learning relate to your work?
The learning activity provided a comprehensive understanding of neuroplasticity, particularly its relationship to motor recovery versus compensation, and its significance in post-stroke rehabilitation. By reframing AFOs as essential rehabilitative tools that align with motor learning principles, I gained valuable insights into how these devices can enhance recovery outcomes for my patients. Furthermore, identifying the key design features that make AFOs effective for gait rehabilitation will inform my practice, enabling me to implement more effective interventions tailored to the needs of individuals recovering from stroke.

Effect of dynamic knee brace on OA: insights from MAI motion analysis

This activity was arranged:
Professional

How many CPD hours relate to this activity?
1

Start date of event
Friday 20 March 2026

The nature of the learning activity – what did you do?
In this webinar, Professor Paul Lee presented the latest research on the dynamic effects of the UniReliever® Knee (URK) brace in the management of knee osteoarthritis. The session utilised Musculoskeletal Action Imaging (MAI) motion analysis to provide a detailed examination of how the URK brace modulates knee kinematics during functional movements, such as sit-to-stand transitions and squats. Attendees gained an in-depth understanding of the novel MAI technique for assessing knee motion, the biomechanical offloading principles involved, and the potential clinical implications of these findings for optimising rehabilitation strategies, informing treatment plans, and potentially delaying surgical interventions in patients with knee osteoarthritis.

Description of the learning activity – what did it consist of?
The webinar featured Professor Paul Lee, who presented cutting-edge research on the dynamic effects of the UniReliever® Knee (URK) brace in managing knee osteoarthritis. The session employed Musculoskeletal Action Imaging (MAI) motion analysis, which allowed for a comprehensive exploration of how the URK brace influences knee kinematics during essential functional movements, including sit-to-stand and squats. Participants were equipped with a thorough understanding of the innovative MAI technique for assessing knee motion, the principles of biomechanical offloading, and the significant clinical implications of these findings, which can aid in optimising rehabilitation strategies and informing treatment plans for knee osteoarthritis patients.

Outcome of the learning activity – how did the learning relate to your work?
The insights gained from this webinar are directly applicable to my professional practice, particularly in the context of managing patients with knee osteoarthritis. Understanding the dynamic effects of the UniReliever® Knee (URK) brace and the principles of biomechanical offloading will enhance my ability to develop effective rehabilitation strategies tailored to individual patient needs. Additionally, the knowledge acquired regarding the Musculoskeletal Action Imaging (MAI) technique will inform my assessment methods,

CPD Development Diary Entry

enabling me to make more evidence-based decisions that could potentially delay the need for surgical interventions in my patients.

CPD Course (accredited)

How many CPD hours relate to this activity?
0.83

Start date of event
Friday 20 March 2026

The nature of the learning activity – what did you do?
The webinar, presented by Dr. von Kleinsorgen, offered invaluable insights into treatment methodologies derived from his extensive clinical experience. It provided expert guidance on the management of burn injuries and scar formation, encompassing a comprehensive overview of current data, wound healing processes, potential complications, and various types of pathological scars. The session placed a strong emphasis on case studies, offering practical recommendations that highlighted innovative therapeutic approaches, including the use of compression garments specifically designed for the treatment of burns and scars.

Description of the learning activity – what did it consist of?
The learning activity consisted of an informative webinar led by Dr. von Kleinsorgen, who shared his extensive clinical expertise in the field of burn injuries and scar management. The presentation covered a range of critical topics, including the latest data on wound healing processes, common complications associated with burns, and the different types of pathological scars that can arise. By focusing on real-life case studies, the webinar provided practical recommendations and showcased innovative therapeutic approaches, particularly the application of compression garments as a solution for managing burns and scars effectively.

Outcome of the learning activity – how did the learning relate to your work?
The insights gained from Dr. von Kleinsorgen's webinar are directly applicable to my professional practice, particularly in the context of treating patients with burn injuries and managing their scars. The comprehensive understanding of wound healing processes and the identification of complications will enhance my ability to provide informed care to my patients. Additionally, the innovative therapeutic approaches and practical recommendations discussed during the session will enable me to implement more effective

Introducing Agilik,a new smart powered orthosis

This activity was arranged:
Professional

How many CPD hours relate to this activity?
1

Start date of event
Friday 20 March 2026

The nature of the learning activity – what did you do?
Introducing Agilik™ - A new, smart powered orthosis. This innovative solution is designed to enhance mobility and improve the quality of life for patients with knee deficiencies. The cutting-edge technology provides dynamic, powered knee assistance and adaptive resistance when needed, facilitating movement during gait, standing, on slopes, and while navigating stairs.

Description of the learning activity – what did it consist of?
The learning activity showcased the collaboration between Bionic Power and Thuasne®. It provided a concise overview of the evolution of orthotic solutions for patients with significant neuromuscular deficits, highlighting the advancements made in this field. The session delved into Agilik™ Technology, discussing its purpose, functionality, and the positive impact it can have on patient mobility. Furthermore, it explained how Thuasne's expertise in composite materials, when combined with Agilik™, can optimise biomechanical principles to enhance the effectiveness of orthotic devices.

Outcome of the learning activity – how did the learning relate to your work?
The learning activity underscored the collaboration between Bionic Power and Thuasne®, which is pivotal in advancing orthotic solutions for patients with significant neuromuscular deficits. It provided a comprehensive overview of the evolution of these solutions, which is directly relevant to my work in the field. By delving into Agilik™ Technology, I gained insights into its purpose, functionality, and impact, which can inform my practice. Additionally, understanding how Thuasne's expertise in composite materials can optimise biomechanical principles will enable me to apply these advancements in my professional context.

CPD Course (non accredited)

How many CPD hours relate to this activity?
5

Start date of event
Saturday 21 February 2026

The nature of the learning activity – what did you do?
During this learning activity, I focused on understanding the mechanisms of body-powered and myoelectric prostheses. This involved a detailed examination of how these devices function, including their mechanical and electrical components. I also compared the functional, biomechanical, and psychosocial outcomes associated with each type of prosthesis, assessing their effectiveness in real-world applications. Additionally, I applied clinical decision-making frameworks to evaluate the appropriateness of each solution for different patient needs. Finally, I explored future innovations in upper-limb prosthetics, considering emerging technologies and their potential impact on patient care.

Description of the learning activity – what did it consist of?
The learning activity consisted of a comprehensive exploration of the mechanisms underlying body-powered and myoelectric prostheses. I engaged in comparative analysis of the functional, biomechanical, and psychosocial outcomes of these prosthetic solutions, which provided valuable insights into their respective advantages and limitations. Furthermore, I applied clinical decision-making frameworks to guide the selection of appropriate prosthetic options based on individual patient circumstances. The activity also included a forward-looking discussion on future innovations in upper-limb prosthetics, highlighting advancements that could enhance user experience and functionality.

Outcome of the learning activity – how did the learning relate to your work?
The outcomes of this learning activity were directly relevant to my work in clinical practice, as I gained a deeper understanding of the mechanisms of body-powered and myoelectric prostheses. This knowledge enables me to make more informed decisions regarding the selection and fitting of prosthetic devices for my patients. By comparing the functional, biomechanical, and psychosocial outcomes, I am better equipped to discuss the benefits

and limitations of each option with patients and their families. Additionally, the application of clinical decision-making frameworks has enhanced my ability to tailor prosthetic solutions to meet the specific needs of individuals, while the exploration of future innovations inspires me to stay updated on advancements that could further improve patient outcomes.

The nature of the learning activity – what did you do?
I successfully completed the master practitioner level certification in 3D technology under the Instalimb digital fabrication program.

Description of the learning activity – what did it consist of?
The certification focused on digital prosthetic design, modelling for complex transtibial cases, and fabrication processes for complex transtibial cases. This comprehensive programme provided in-depth knowledge and practical skills necessary for the design and production of advanced prosthetic solutions. Through a combination of theoretical learning and hands-on experience, I gained insights into the latest technologies and methodologies used in the field of digital fabrication.

Outcome of the learning activity – how did the learning relate to your work?
The advanced training significantly enhanced my professional background and clinical expertise in prosthetics, further refining my mastery of digital workflow and fabrication techniques for complex lower limb cases. This knowledge directly contributes to my ability to deliver high-quality prosthetic solutions tailored to individual patient needs. Additionally, the skills acquired through this certification will enable me to implement innovative practices within my workplace, ultimately improving patient outcomes and advancing the standards of care in my field.

The nature of the learning activity – what did you do?
I completed a practitioner-level certification in 3D technology under the Instalimb digital fabrication program, which provided me with a comprehensive understanding of the latest advancements in this field.

Description of the learning activity – what did it consist of?
The certification program consisted of several key components, including the application of 3D scanning and modelling techniques. It also involved the implementation of clinical protocols specifically tailored for lower-limb prosthetics. Additionally, I focused on mastering digital processes related to transtibial prosthetics, which are crucial for enhancing patient outcomes.

Outcome of the learning activity – how did the learning relate to your work?
The training significantly enhanced my professional practice as a qualified prosthetist and orthotist. It builds upon my existing background in 3D printing and modelling within the orthotics and prosthetics field, while also expanding my knowledge and clinical expertise in utilising advanced digital fabrication tools. This newfound expertise will enable me to provide more effective and customised solutions for my patients, ultimately improving their quality of life.

Knowledge and Skills Framework

1: Communication Communication has many forms and is a two-way process. It involves identifying what others are communicating as well as communicating yourself and the development of effective relationships.
2: Personal and People Development This dimension is about developing yourself and contributing to the development of others through both formal structured and informal ad-hoc methods.
3: Health Safety and Security This dimension focuses on maintaining the health, safety and security of everyone in the organisation and anyone who comes into contact with it. It includes tasks that are undertaken as a routine part of work, such as moving or handling.
4: Service Improvement This dimension is about improving services in the interests of the users of those services and the public as a whole. The services might be services for the public (patients, clients and carers) or be services that support the smooth running of the organisation (such as finance, estates). The services might be single or multi-agency and uni or multi-professional.
5: Quality This dimension relates to maintaining high quality in all areas of work and practice, including the important aspects of effective team working. Quality can be supported using a range of different approaches including: codes of conduct and practice, evidence-based practice, guidelines, legislation, protocols, procedures, policies, standards and systems.
6: Equality and Diversity It is the responsibility of every person to act in ways that support equality and diversity. Equality and diversity is related to the actions and responsibilities of everyone - users of services including patients, clients and carers; work colleagues; employees, people in other organisations; the public in general.

Four Pillars of Advanced Clinical Practice

1: Clinical Practice Critically reflect on your contribution to the delivery of safe care. Examine your practice in relation to enhancing person-centred care.
2: Leadership Examine your practice in relation to how you demonstrate self-leadership. Critically reflect on your behaviours and actions that impact on working collaboratively with colleagues.
3: Facilitating Learning Engage in professional development that demonstrates your commitment to career-long learning and excellence in practice. Demonstrate ability and confidence in developing and supporting others to learn.
4: Evidence, Research, and Development Source evidence relevant to an aspect of your practice. Review service user participation in your workplace.
